Project 01-01

ITSC202 - secure Programming Fundamentals

The objective of the assignment is to learn to set up virtual machine, as we will be using various virtual machines throughout the program.

Create VirtualBox machine with 2GB ram, 5GB hard disk of the VDI type, and install Ubuntu 12.04 bare server on it.

Name the machine assg0101.

Submit your step by step notes and results in file named assg0101result.txt, in your personal repository, subdirectory 0101:

include the size of the VDI file created.

and also submit the machine file, assg0101.vbox
